NOTE: Use logtest1.txt file for generating reports. (Sample)

Steps:

First time user:

1) Run CGI-Server.bat file
2) Click on Generate tab → complete→Generate→Settings→

    Log File Location: location of logfile with file name (logtest1.txt)

    Output File Location: name of folder in which you want to store your reports→submit

3) Click on Generate tab → complete→Generate

    It will start generating reports....

4) Click on view link→any date
5) Now you can see all reports generated by filterlogs application
